

Hardware Co-Design Device to Datacenter

Trusted for over 30 years and serving more than 30 countries, SourceCode is a global provider of co-designed IT systems for next generation intelligent infrastructure. The company's systems are optimized for high-performance computing (HPC), artificial intelligence (AI), big data storage, the Internet of Things (IoT), and traditional IT applications.

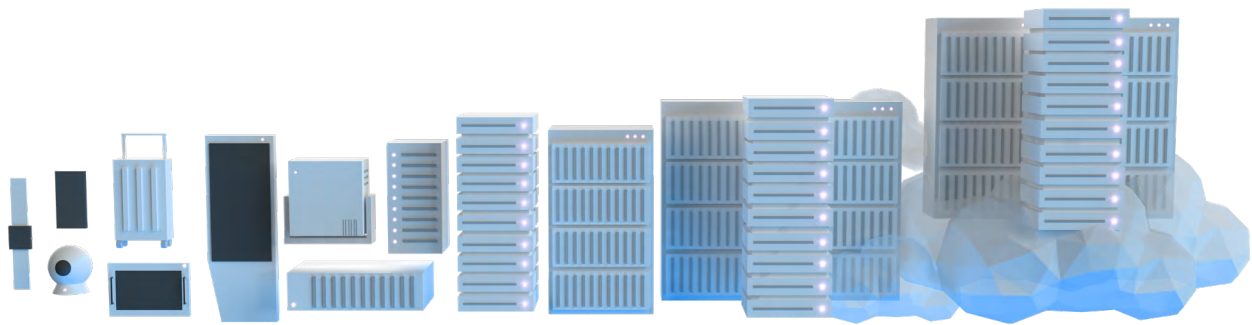

Products and Solutions

SourceCode products span from device to datacenter and include Comark IoT/edge and rugged embedded devices, Silicon Mechanics clusters and reference architectures, as well as systems and storage brands Thinkmate, and Boston Limited.

Engagement Model Reduces Costs and Complexity

SourceCode's products and solutions are available via its engineering-led, co-design engagement model or its industry leading e-commerce platform. They provide two engagement paths that reduce complexity and cost.

Co-Design

Custom solutions,
engineering-led process.

eCommerce

Industry's best configurator
and ecommerce platform.

Strong Partnerships

A robust supply chain and strong alliances enable the co-design model. SourceCode is proud to be an authorized technology partner of global technology leaders, including AMD, ASUS, Intel, NVIDIA, Seagate, Supermicro, Tyan, VMware, Western Digital, and an extensive list of other technology leaders.

Global Manufacturing Sites

The company operates four ISO certified co-design manufacturing sites in North America, United Kingdom, and Germany, as well as assembly and test centers around the world. These include U.S.-based testing and certification, including an ITAR certified manufacturing facility, as well as manufacturing facilities with other industry-specific certifications.

Stellar Service

Superior quality and responsive customer service have made and kept SourceCode a trusted name for over 30 years.

Why SourceCode?

☑ CO-DESIGN NATIVE

- 30 years of expertise in custom engineering and consistent financial strength
- State-of-the-art manufacturing facilities in the US and Europe, and assembly and test sites around the world
- Flexibility to start small and grow with you

☑ DEVICE TO DATACENTER

- Co-design and delivery of end-to-end, device-to-datacenter enterprise solutions
- Ability to engineer special devices; use your components, SourceCode products, or tap the market
- Strong established global supply chain to source, build, support, and evolve the solution

☑ INTEGRATED BEST OF BREED

- Technology neutral approach plus access to latest technologies
- Leverage commodity open source whenever possible
- Exceptional technical support ensures unparalleled customer satisfaction
