FaxMaker Online

Online faxing, with no installation required

GFI FaxMaker Online is an internet-based faxing service that delivers easy-to-use, automated online faxing. Users can send and receive faxes using email — no matter where they are or what device they are using. GFI FaxMaker Online does not require any hardware installation. The service is secure, scalable and cost-effective. It frees your organization from machines, phone lines, modems and fax boards as well as ink and paper.

✓ **Automated faxing, fewer errors—**GFI FaxMaker Online is a cloud-based faxing service, so you don't have to worry about compatibility with your email server, email service or operating system. Users can send faxes from a computer, tablet or smartphone using any email system or application. When a fax is received, it is automatically routed by email to the recipient who is assigned to that fax number.

Automated, online faxing saves time and resources compared to manually printing, retrieving, entering numbers into a fax machine and sending. It reduces the risk of confidential faxes being mis-dialed, lost or read by unauthorized individuals.

✓ **Fax single or multiple documents—**GFI FaxMaker Online uses a Windows-based print-to-fax driver that enables users to fax almost any document type (such as Word or PDF) directly from an application without needing to print a paper document to feed into a fax machine. Your organization can also send multiple documents to a fax number and transmit a document to more than one recipient simultaneously, increasing efficiency and saving time.

✓ **Secure fax transmission—**Faxing protocols ensure it is nearly impossible to intercept a fax in mid-transmission, which makes it more secure than email. GFI FaxMaker Online integrates with your secure network infrastructure to support on-site users and remote workers who require fax services at home or on the road. In addition, the solution provides security features such as data encryption and Transport Layer Security (TLS).

✔ **Feature-rich APIs—**GFI FaxMaker Online includes APIs, which enable you to integrate automated faxing into third-party applications. Integrating fax technology reduces the time and cost of manually delivering documents, and increases the security and privacy of information you share with your customers and partners.

✔ **Reporting—**GFI FaxMaker Online provides advanced reporting features, allowing you to view a high-level summary of fax usage or drill down to individual users and fax numbers. Your organization can run detailed and summary reports and export to PDF, XLS(X), RTF, MHT, HTML, TXT, CSV and PNG file types. Reports can be filtered on inbound, outbound, department, sender, fax number, delivery status and date range.

✔ **Flexible administration—**A built-in dashboard allows administrators to view fax communications over time, filter the results and drill down to transmission details. They can use the dashboard to set or change fax routing rules. GFI FaxMaker Online is highly scalable, and supports up to thousands of users. Your organization can add, edit, suspend or remove users and departments as needed, without additional cost.

✔ **Choose your connectivity—** GFI FaxMaker Online is ideal if you don't want to run your own fax server environment. However, if you have an on-premise or virtual infrastructure, we also provide a range of connectivity options through the GFI FaxMaker server:

- On-premises using a fax modem with analog, digital or Fax over IP (FoIP) connectivity
- As a virtual FoIP using a gateway or Voice over IP (VoIP) phone system
- As a hybrid solution using online fax services; no fax server, cards or phone lines required

Determine which solution is right for you:

FaxMaker	**FaxMaker Online**
