

Acronis Cyber Protect Cloud Integration with N-able N-central

Streamline your service provider business by keeping your entire IT environment interconnected and secure

What's the importance?

With cyberattacks growing in sophistication, speed, and intensity, service providers must realize that it's not a matter of if an attack will compromise their clients' systems, but when. Unfortunately, managing different software, and constantly switching between multiple management tools can lead to missed alerts or unperformed critical actions – putting clients at risk of permanent data loss.

The integration of Acronis with N-able N-central — a flagship RMM platform — will allow you to ensure your clients' data is always protected, and alert you to issues through the same interface you use to manage your other service offerings.

Gain the advantage

The script-based integration between Acronis Cyber Protect Cloud — our single-agent solution for cybersecurity, data protection, and endpoint protection management — with N-able N-central enables remote mass-deployment of Acronis Cyber Protect Cloud on as many workloads as needed with minimal efforts. Additionally, you can efficiently manage, configure, and monitor cyber protection plans, tasks, and statuses through a single interface.

About Acronis Cyber Protect Cloud

The only single-agent solution that natively integrates cybersecurity, data protection, and management to protect endpoints, systems, and data.

The world's best backup and recovery

Full-image and file-level backup and recovery on more than 20 workload types – with near-zero RPOs and RTOs

Enhanced with essential cyber protection at no additional cost

An advanced machine-intelligence-based behavioral detection engine stops malware, ransomware, and zero-day attacks on client endpoints and systems

With protection management built for service providers

Enable thorough post-incident investigations and proper remediation, while keeping costs down by collecting digital evidence and storing it in a secure central repository.

Acronis Cyber Protect Cloud integration with N-able N-central use cases

Keep your clients' workloads operational around the clock, spend less time on administrative tasks and more on growing your businesses.

Simple configuration via a set of scripts

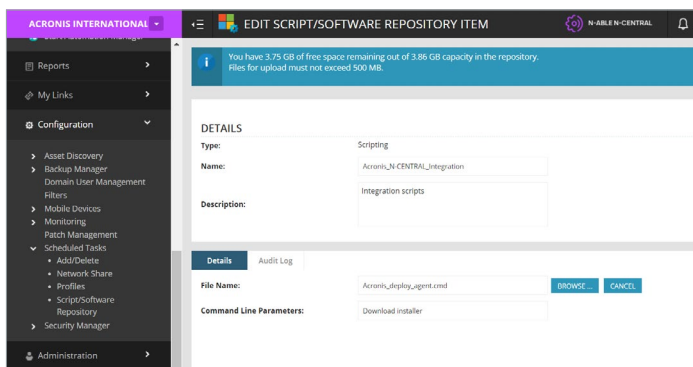

The integration with N-able N-central leverages specific scripts to enable key cyber protection functionalities. The scripts are available for Windows, Linux and macOS and can be downloaded from the Acronis Cyber Protect Cloud management console.

Customer mapping

View all your accounts within Acronis Cyber Protect Cloud management console. Service providers can select one or more N-able N-central customers and map them to an existing Acronis tenant. In this way any client's workload with an Acronis agent already deployed would be automatically assigned to the right customer tenant, ensuring controlled and secured process.

Remotely install or uninstall the protection agent

Service providers can deploy the cyber protection agent remotely to as many workloads as needed by uploading a special agent installation script to the Automation Manager from N-able N-Central. The script has different versions to support Windows, Linux and macOS deployments.

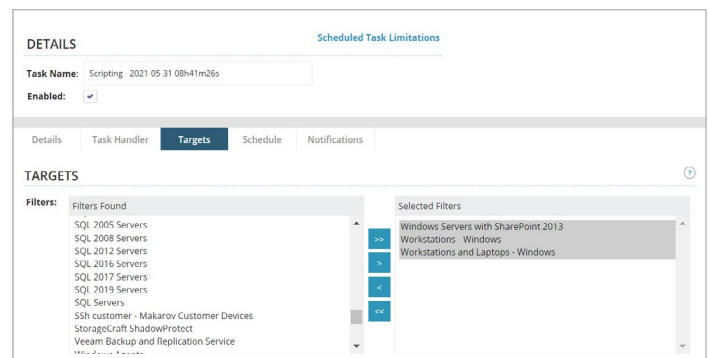

Apply and revoke cyber protection plans on a client level

Leverage the cyber protection plan configured during the initial setup. Apply it to one or multiple client workloads via a script that can be easily uploaded to the

Automation Manager from N-able N-central. Unleash the power of [Acronis Cyber Protect Cloud](#) to strengthen the cyber resilience of you and your clients.

Schedule or manually run cyber protection tasks

Service providers can also choose to start a script and run a task with key cyber protection functionalities — backup, antivirus and anti-malware protection, vulnerability assessments, patch management, or data protection map.

Monitor protection statuses, and receive Acronis alerts and notifications

Monitor the status of the applied protection plans or tasks within the N-able N-central interface. Seamlessly track if antivirus and anti-malware scans are run on time, backups are set on schedule, and patching is performed as required. Additionally, the integration synchronizes Acronis alerts to the alerts in N-able N-central, allowing you to process them within your existing rules setup.
